h 11 4→16 + Poisson girth 18.9 mesh/pts 1.00

h 13 today girth 18.8 mesh/pts 1.01

h 13 4→16 + Poisson girth 18.8 mesh/pts 1.01

Per-slice before / after — the MLS candidate

left column today: 4× MLS, then the alpha-shape fallback (Poisson tunnelled)

right column candidate: 4× then 16× MLS, then Poisson (closes, $\chi = 2$)

grey = cleaned points blue = ellipse through them red = the solid's section

mesh/pts = section area over ellipse area; above 1.10 is titled in red

output_test6	mesh/pts	today 1.105	->	candidate 0.989	(Poisson χ after = 2)
--------------	----------	-------------	----	-----------------	----------------------------

output_fanta_orange	mesh/pts	today 1.003	->	candidate 0.999	(Poisson χ after = 2)
